Pocket Change

A BUSD Miner with High ROI

Whitepaper

Abstract

Pocket Change is a BUSD miner that literally "changes your pocket for the better" as the crypto world experiences a bear market. An average crypto investor has lost more than half of his trading capital and returns since the bear market began, and pulling back, turning the losses into some profits, seems almost impossible.

Pocket Change is an intuitive initiative focusing on making reasonably daily incomes for digital investors by holding (unstaking) or staking BUSD. The Pocket Change creates passive income for these investors to gather momentum to invest in other projects or cover up their losses. However, this project is also our way of raising funds to finance our future DAO project, HiveMind, and every project on our roadmap.

HiveMind is our DAO project that will focus on creating cash flows from both asset investments and creating businesses like buying land and properties. We keep a portion of the fees from Pocket Change in a smart contract that maintains the project for longevity. The rest of the profit is to keep developing HiveMind till it is ready and launched.

Pocket Change embraces users' inclusivity, and it is community-based. Our topmost concern is YOU! We are creating the safest and most efficient system to keep the dreams and hopes of every crypto investor alive.

INTRODUCTION

In a bear market where the candle lights are often red, and crypto investors with billions reduced to a few thousand in their wallets, every digital investor struggles to stay afloat, heavily hit by the dip. Investors who buy and hold coins watch their assets diminish, and the traders who buy and sell coins after little profits have lost almost their money, hoping the candle lights will turn green.

Crypto investors have to leave their assets in stable coins— choosing what is safer than risking and losing it all while hoping to double it. But isn't an investor supposed to "invest" and make profits? Could investors leave their assets in stable coins and still make a profit daily, turning their losses into profits with time?

That is where Pocket Change comes in.

Pocket Change

Pocket Change is a BUSD Miner inspired by the bear market and its damaging effects. Pocket Change is a "win-win" system that helps digital investors to make passive income when they stake their BUSD and to hold their assets with no risk. Every investor in the Pocket Change ecosystem gets a daily dividend of about 3% for investing their BUSD over a certain period.

Pocket Change alleviates the losses from the bear market as our users can recover their lost money gradually and build a portfolio to fuel their investments. We designed the Pocket Change for the longest time possible through a sustainable smart contract that ensures there is enough funding to keep it working.

A portion of the fees from every transaction on the platform goes into a contract to maintain the platform, while the rest goes into funding our future DAO project, HiveMind DAO. Pocket Change is an integral part of the ecosystem we are building.

Introducing HiveMind DAO

HiveMind DAO is a fully autonomous and transparent project creating cash flow for its members through proceeds from assets and business investments. The HiveMind DAO's activities involve purchasing and selling lands, farms, and other properties. This DAO project will further amplify our intent as a community-based team, building projects where our users are in control.

Our Goal

Our mission is to build an ecosystem with multiple passive income opportunities for digital investors. Pocket Change is just a part of these projects.

02.
THE ECOSYSTEM

Pocket Change is many steps ahead of traditional miners with industry-leading features for a completely outstanding experience for everyone.

Intuitive

The platform includes edge-cutting approaches like an earnings calculator, robust performance dashboards, and charts to help users make strategic decisions.

User-centric

Every action, design and policy revolves around our users. As a growing crypto brand, we are keen to hear from our users about our services, their challenges, and how to improve them.

Purpose-driven

We stay true to our goals and constantly work toward achieving them. We aim for digital excellence through our realistic roadmap.

03.
STAKING AND DIVIDENDS

You can stake or un-stake at any time and start earning 3% daily. With a flat staking fee of 10%, you can calculate your daily dividend using our earnings calculator. Our un-staking fees start from 20% and decrease to about 12% with time. You can compound your staking or create a new one. It all depends on your investment goals.

The table shows our staking and dividends policy.

Levels	Days	Daily Rewards	Unstake Fee
Level 1	1 – 20	3 %	20 %
Level 2	20 – 30	5 %	16 %
Level 3	30 – 40	6 %	15 %
Level 4	40 – 50	7 %	14 %
Level 5	50+	10 %	13 %

04.
OUR ROADMAP

Milestone 1: Pocket Change
Our BUSD Miner to raise fund for our future project, HiveMind DAO.

- Stable Coin Miner Website Design
- Miner Smart Contract
- Miner Contract Audit
- Miner Test
- Miner Whitepaper
- Miner Marketing

Milestone 2: Zeni Token
Our native token to trade on the HiveMind DAO.

- Native "Zeni" Token Creation

Milestone 3: HiveMind DAO

Our community-based DAO for digital investments and opportunities.

- HiveMind Dao Smart Contract
- Hive Mind Web Design
- Token And Dao Contract Audits
- Testing
- Marketing Campaign
- Launch

05.
CONCLUSION

Pocket Change is bringing a revolutionary shift to how the bear market affects crypto investors and how they can manage their assets for the better. With a high daily ROI of over 3% for staking BUSD for a short time, users can build their asset portfolio and make more digital investments. The success of Pocket Change will birth HiveMind DAO– a DAO project to help every investor earn bigger.
